NEW PRODUCT OFFERS TOYOTA OWNERS A SAFER RIDE THIS WINTER

Pacbrake Releases Air Suspension Kits for Toyota Tundra

BLAINE, WA – Pacbrake’s already impressive line of air suspension products has now grown a little larger with the release of two kits designed specifically for Toyota Tundras. The kits can be installed on any version of the truck made between 2001 and 2009.

Pacbrake Air Suspension Kits provide drivers with added support and better control for an overall smoother, safer ride. Made with 2-ply rubber, the air springs solve many everyday towing and hauling problems, such as vehicle sag, sway and bottoming out - problems which are even more pronounced during the Winter months.

The air springs feature 1” thick, solid aluminium end caps and 18 steel support wires, twice that of the leading competitor. These innovations extend the life of air springs and provide superior performance for Tundra owners.

The Toyota Tundra Air Suspension Kits are available through Pacbrake’s network of authorized dealers and are backed by one of the best warranties in the industry. For more information about Pacbrake automotive products, visit www.pacbrake.com or call 800.663.0096.

Pacbrake is an award-winning manufacturer and supplier of cutting edge vehicle technologies. They have engineered solutions for many vehicles, including RVs, light-, medium-, and heavy-duty trucks. From their flagship PRXB Exhaust Brakes to their new line of Air Suspension products, Pacbrake is leading the way to a better, safer ride.
